Meeting assets for Audel & Andy SDRT are ready!

Meeting summary

Key takeaways

- Epigenetics was discussed, explaining how trauma can be passed down through genes and how environment can help offset genetic predispositions
- The concept of Morphic Resonance was explored, suggesting that information can be shared between organisms without direct genetic transfer
- Philosophical discussions about quantum physics, the nature of the universe, and the concept of energy connecting all things
- Both participants reflected on their personal experiences with trauma and how it shaped their lives
- The importance of meditation was emphasized as a way to maintain perspective and gratitude

Discussed topics

Epigenetics and intergenerational trauma

Audel and Andy discussed how trauma can be passed down through generations via genetic mechanisms.

- **Details**
 - **Andy:** Shared information about a Star Talk episode featuring Bianca Jones Martin Marlon discussing how intergenerational trauma is passed through genes
 - **Audel:** Drew a diagram explaining the nature vs. nurture concept, showing how biological inheritance (50% from each parent) interacts with environmental factors
 - **Audel:** Explained how epigenetics can help "turn off" negative genetic predispositions through supportive environments
 - **Andy:** Mentioned research suggesting trauma factors are primarily passed down from fathers
 - **Audel:** Discussed how he researched epigenetics before having his son to provide the best possible environment

Morphic Resonance and interconnectedness

Discussion about Rupert Sheldrake's theory of Morphic Resonance and how it relates to indigenous perspectives.

- **Details**

- **Andy:** Explained Sheldrake's theory that suggests traits beneficial for survival might spontaneously appear in members of the same species in different locations
- **Andy:** Connected this concept to indigenous perspectives on interconnectedness shared by Leroy Little Bear
- **Audel:** Related these concepts to the Akashic field or "Kashik library" in spiritual traditions
- **Andy:** Discussed how young people might be more attuned to these connections before developing mental barriers

Quantum physics and the nature of the universe

Philosophical discussion about the universe's expansion, dark matter, and the fundamental nature of reality.

- **Details**

- **Andy:** Shared information about recent James Webb Telescope findings suggesting the universe might be older than previously thought
- **Andy:** Questioned what the universe is expanding into and the nature of "empty" space
- **Andy:** Discussed the composition of atoms and matter, questioning if there could be components in space that aren't organized as matter
- **Audel:** Referenced "The Quantum and the Lotus" by Matthieu Ricard, connecting quantum physics to spiritual concepts

Personal reflections on trauma and childhood

Both participants shared personal experiences related to childhood trauma and difficult holiday experiences.

- **Details**

- **Audel:** Mentioned Christmas was difficult growing up due to poverty and family conflicts
- **Andy:** Related to this experience, mentioning items being stolen in his family
- **Audel:** Discussed how these experiences influenced his approach to parenting
- **Andy:** Shared that school was his "safe place" and "refuge" from home life

Meditation practice

The participants engaged in a 15-minute meditation session.

- **Details**

- **Audel:** After meditation, expressed gratitude for his life and mentioned how meditation helps him maintain perspective
- **Andy:** Shared thoughts about being mindful of those less fortunate, particularly immigrant families separated during holidays
- **Audel:** Referenced the "Bodhisattva vow" and the motivation to continue working for the benefit of others

Challenges

- No specific challenges or blocked tasks were identified in the meeting

Action items

- No explicit action items were assigned during this philosophical discussion
- Both participants will meet again in 2026 (next year)
